New parking options

As part of the removal of three level crossings in Cheltenham and Mentone, the Level Crossing Removal Project is providing new parking arrangements.

Rail passengers will have the same amount of parking when the project is complete as there is now.

We have worked closely with Public Transport Victoria, Transport for Victoria and the City of Kingston to determine the best options for rail passengers.

At Cheltenham:
- there are currently 350 parking spaces across three station car parks
- there will be 220 spaces in the new four-storey commuter car park, with the remaining rail passenger parking to be provided within the station precinct and along Edward Street, where we will upgrade the on-street car parking with improved lighting and CCTV
- additional accessible parking spaces will be provided within the station precinct
- new Parkiteer bicycle storage and bicycle hoops
- there are 38 short-term parking spaces, which will be closed during construction and returned within the station precinct when works are complete.

At Mentone:

- There are currently 272 rail passenger spaces in the two station car parks.
- There will be 96 spaces in the station car park and 176 along Como Parade East and Como Parade West, where we will upgrade the on-street car parking with improved lighting and CCTV.
- Additional accessible parking spaces will be provided within the station precinct.
- New Parkiteer bicycle storage and bicycle hoops.

During and after construction

There will be disruption to car parking at Cheltenham and Mentone for at least a year during construction.

The station car parks will be closed from mid 2019 to late 2020, with alternative parking available for train passengers.

We are working with the City of Kingston and transport agencies to determine the best location for this parking.

The Victoria Government is removing 18 dangerous and congested level crossings on the Frankston line, including at Charman Road and Park Road in Cheltenham and at Balcombe Road in Mentone.
